

HOW DO YOU ENABLE A COMPUTER TO LEARN?

A computer program is said to learn from experience E with respect to some class of tasks T and performance measure P , if its performance at tasks in T , as measured by P , improves with experience E .

Tom Mitchell, 1998

EXPERIENCE, TASK, PERFORMANCE!

- ▶ **Experience (E):** the **data** or information that the machine learning model is trained on.
- ▶ **Task (T):** what you want the model to achieve or the problem you are trying to solve.
- ▶ **Performance (P):** a measure of how well the model is performing the task T after having been trained on the experience E .
