UNSUPERVISED LEARNING

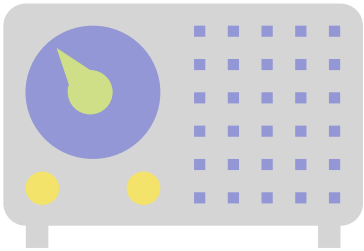

World Embedding

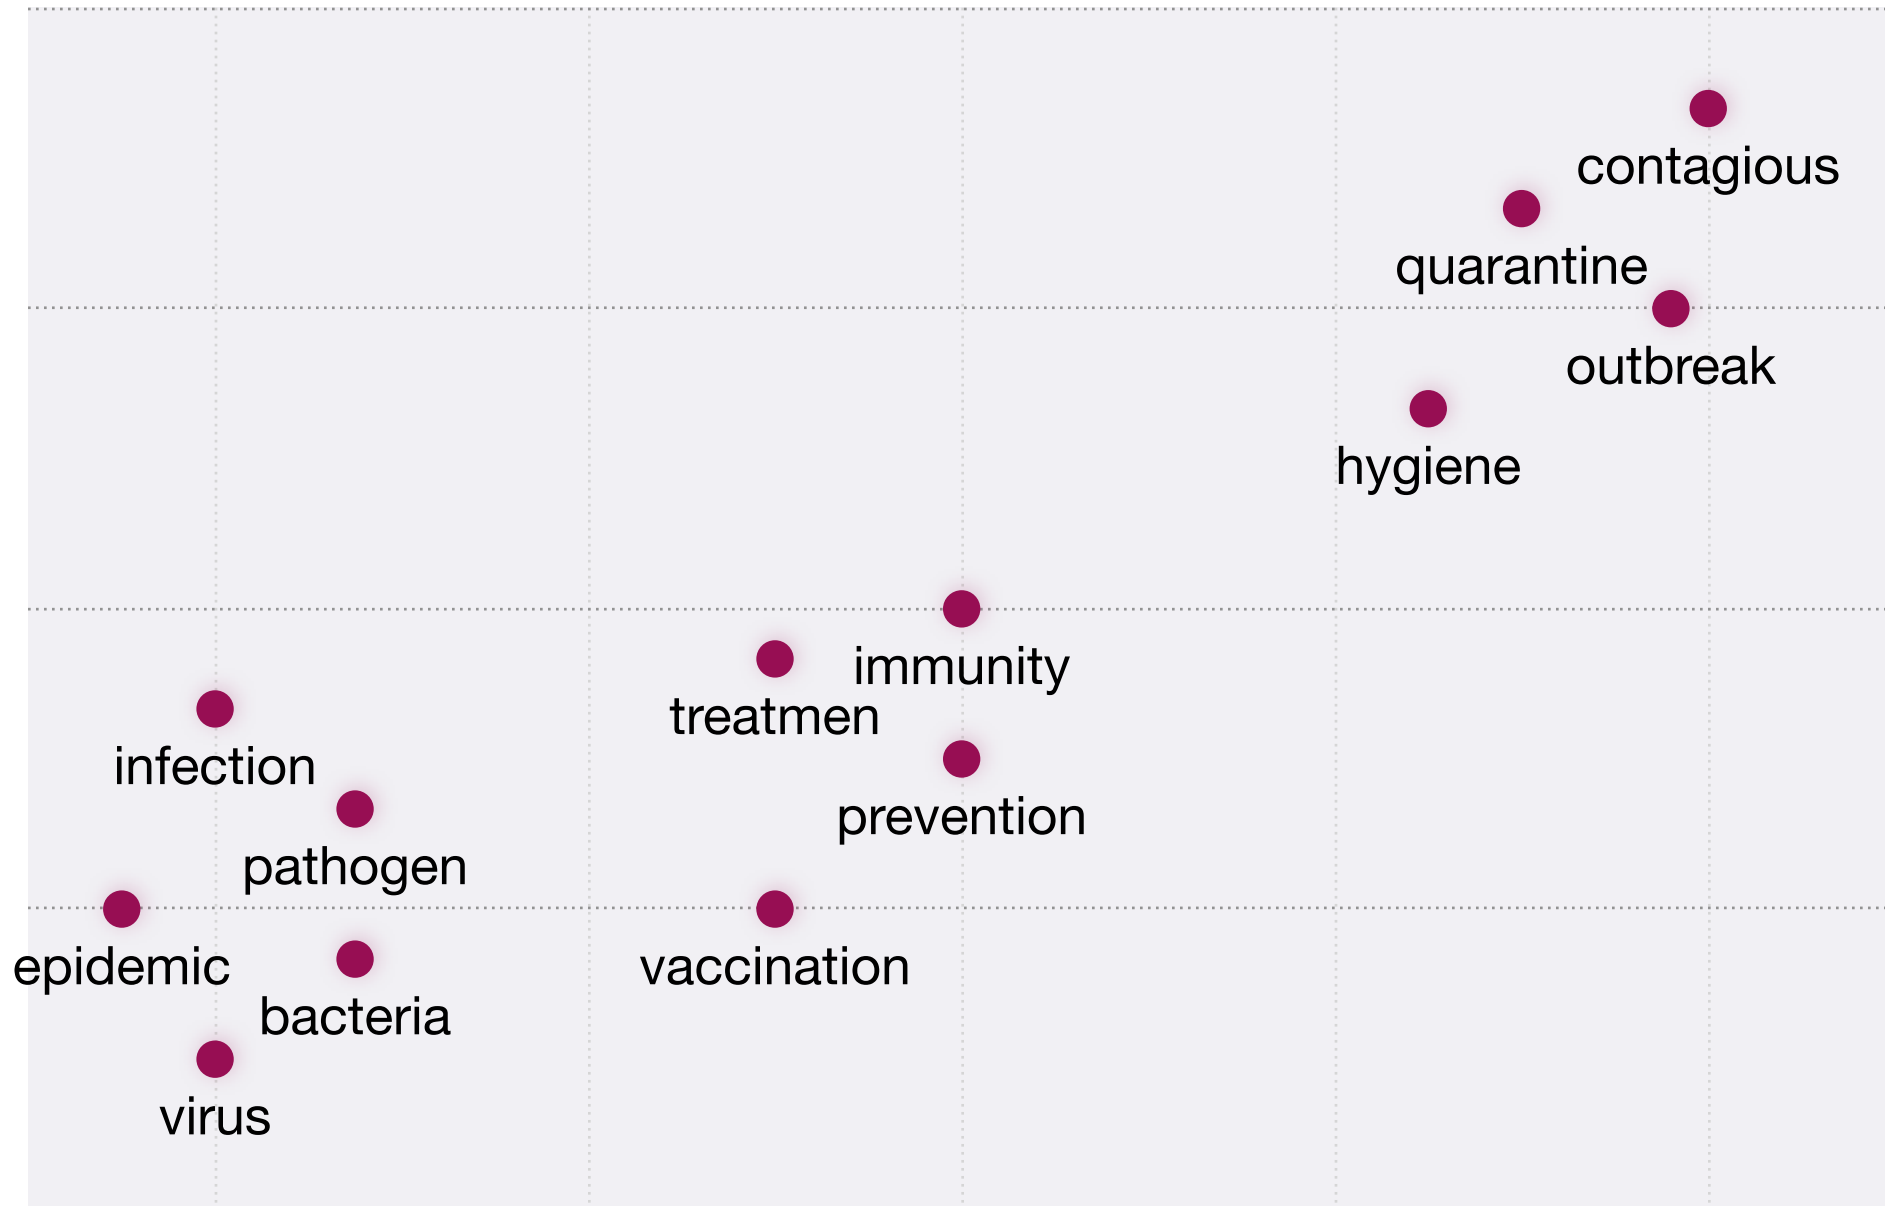

Word embeddings are unsupervised learning models trained on extensive text data, devoid of labels or annotations.

They are a way to convert words into **numerical vectors** so that similar words are placed close to each other in a mathematical space.

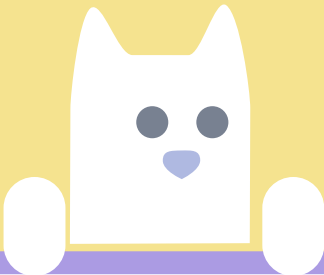

Similar words have similar vectors

Binwinnisker

Word embeddings are unsupervised learning models trained

extensive text data, devoid of labels or annotations.

They are a way to convert words into numerical vectors that are similar

Large Language Models

generate human-like text.

Language models are Machine Learning models trained on extensive text data and

utilize word embeddings for understanding context.

Learn patterns through unsupervised pre-training.
