FUNCTIONS

,denoted as

maps to a unique

and output

In mathematics, a function is a relation between input

sets, whenever each

v

x

$$y = f(x)$$

This notation means that for a given

value, the function

!

varue.

cigarettes smoked daily and the risk of developing lung cancer over a 40-year span.

We have conducted a study and found a linear relationship between the number of

• If a person does not smoke, the risk is 1%.

• For every cigarette smoked daily, the risk increases by 0.5%.

$$y \equiv 0.01 + 0.0005x$$

Lung cancer risk

over 40 years

The # of cigarettes

snoreddaily

$$y \equiv 0.01 \pm 0.0005$$
